

Exploring fixed index annuities

Annuity

How you can use this kit with clients

Client presentation

The front of each page features client-friendly valuable information, graphics, and even interactive pieces to help you get the conversation going.

Financial professional notes

The back of each page will help guide you through the kit with talking points and important reminders.

If you have a whiteboard marker handy, you can interact with your client as they place a check mark next to what interests them on certain pages. When the meeting is over, simply erase the marks and reuse with the next client who could benefit from a fixed index annuity.

Use this checklist to understand some of your client's most pressing concerns.

This helps start the conversation about financial needs in retirement.

The term financial professional is not intended to imply engagement in an advisory business in which compensation is not related to sales. Financial professionals that are insurance licensed will be paid a commission on the sale of an insurance product.

Which ones are you most worried about?

- Outliving my money
- Flexibility/liquidity of my money
- Maintaining my current lifestyle through retirement
- Protecting my premium
- Social Security may not be available
- Need for nursing home care

This conversation may help you understand your clients' goals and determine an appropriate product direction. Familiarize yourself with our portfolio using the product overview (form 24279Z).

Is a fixed annuity right for you?

Which of these benefits are you interested in?

- Income for life
- Protecting premium
- Guaranteed rate of return
- Potential for growth
- Tax deferral
- Access to a portion of my money (liquidity)
- Leaving a legacy/death benefit

What is a fixed index annuity or FIA?

Fixed

Fixed index annuities are contracts with insurance companies that generally offer certain guarantees, such as not losing value due to market downturns.

Index

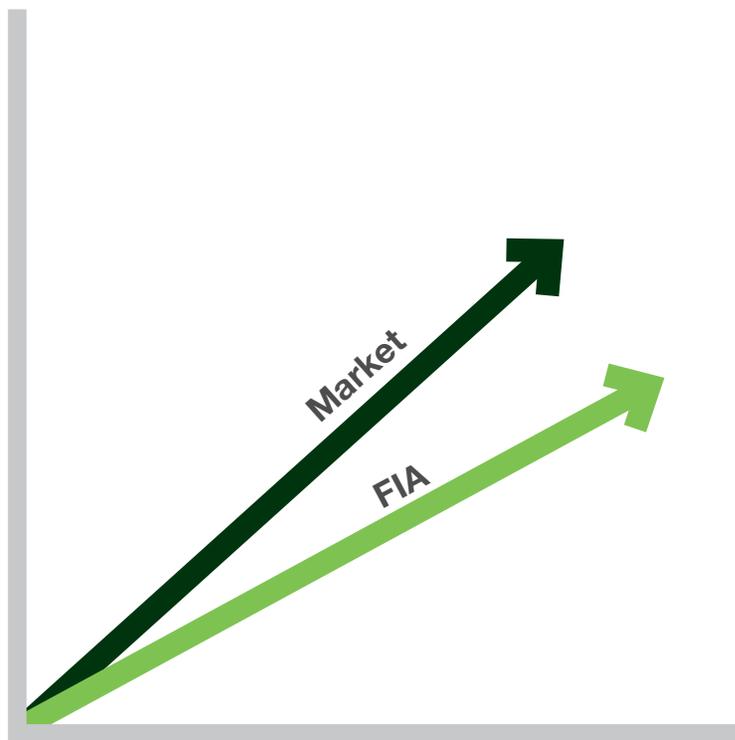

A fixed index annuity is a unique annuity that credits interest to your annuity's value based upon the movement of an underlying market index. Growth of a FIA is calculated based on the index it is linked to, and how that index performs.

Annuity

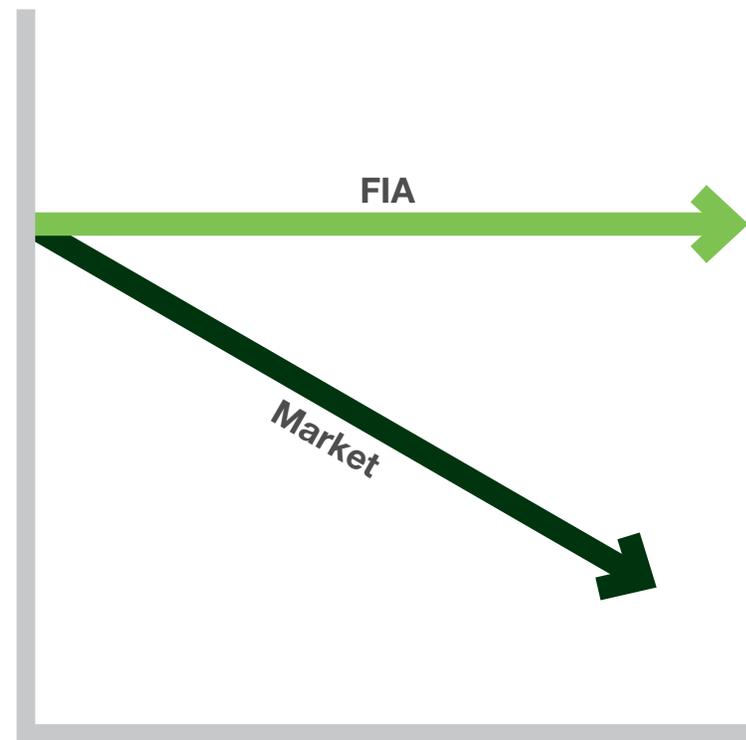

An annuity is a contract in which an insurance company grows client premium and then may make a series of income payments at regular intervals. These payments can be immediate or deferred depending on the annuity type. Annuities are most often bought for accumulation and future retirement income.

Each FIA product generally credits a portion of the total index gain based on the crediting method chosen, but does not lose value due to market downturns.

In an up market

In a market downturn

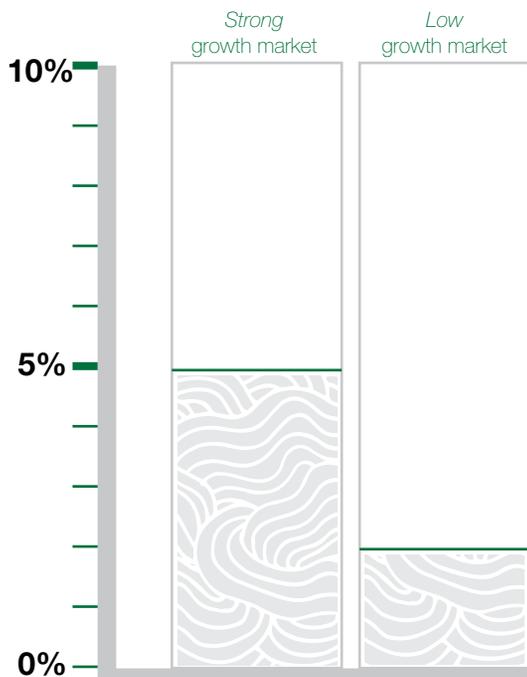

The cap, participation rate and margin differ by product and are declared annually (or by term). Product illustrations before your client meeting may help provide greater understanding of these product features.

Indexing continued...

Cap

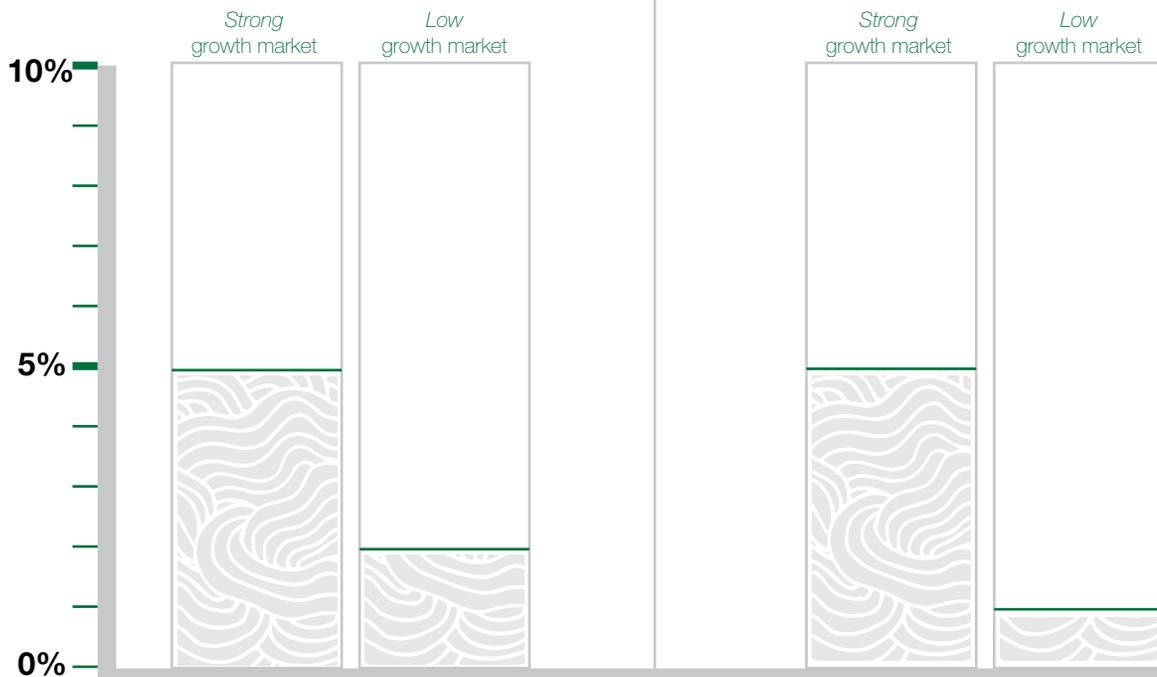

Some annuities may apply an upper limit, or cap, on the percentage change in the index value. This is the maximum rate of interest the annuity can earn for that year.

Cap = 5%

Participation rate

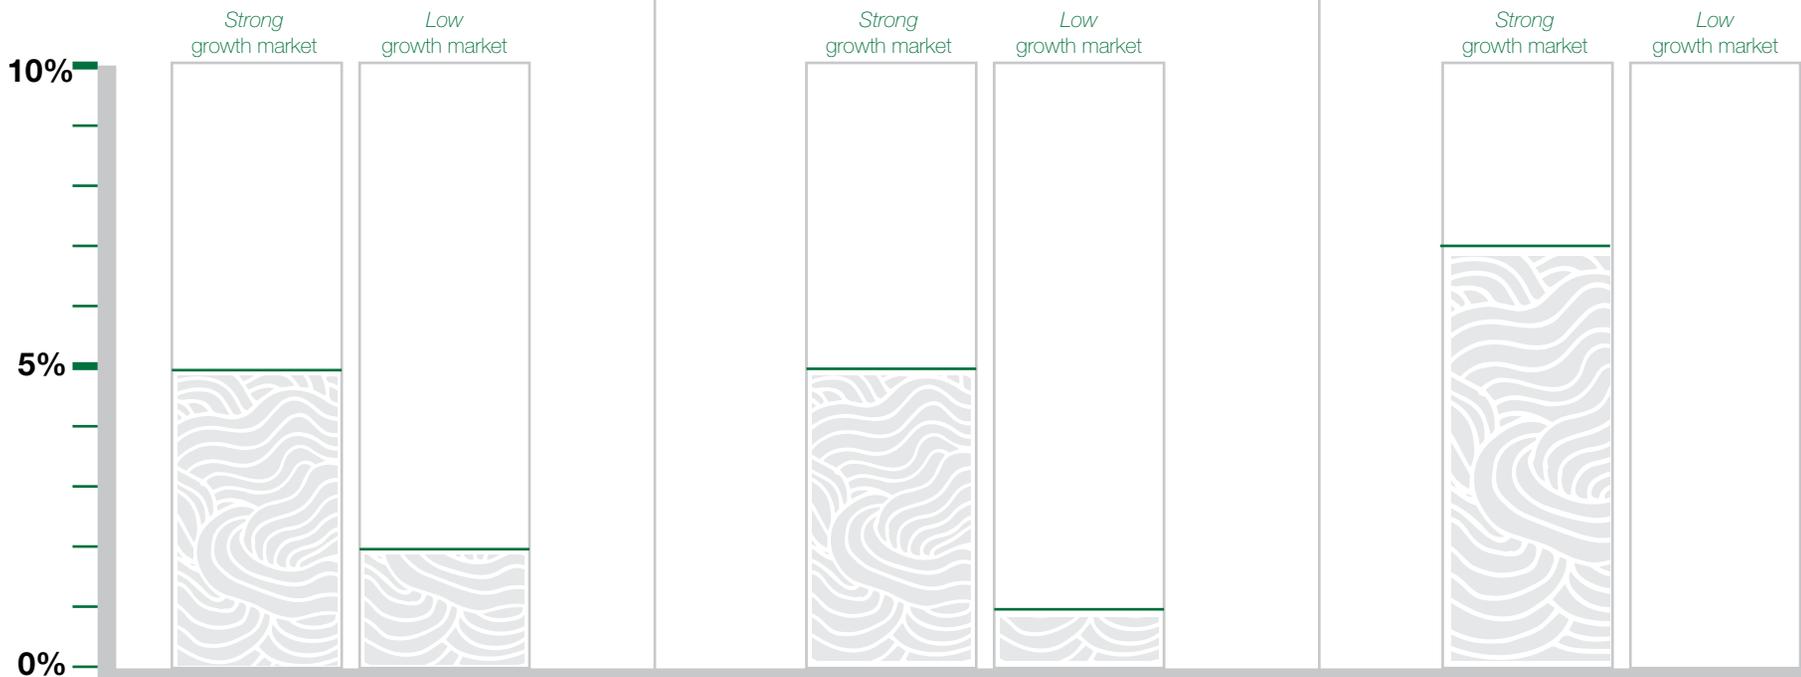

Some annuities apply a participation rate which is a percentage of any increase in the index value that will be used to calculate the interest credit percentage.

Participation rate = 50%

Margin

In some annuities, the interest credit percentage is calculated by subtracting a specific percentage from the percentage change in the index value. This percentage is sometimes referred to as the margin.

Margin = 3%

These hypothetical examples demonstrate how the cap, participation rate and margin apply in a **strong growth market (10%), and a low growth market (2%).**

Interest credit(s) will never be less than zero

Clients may have questions about the differences
between taxable and tax-deferred products.

FIA highlights:

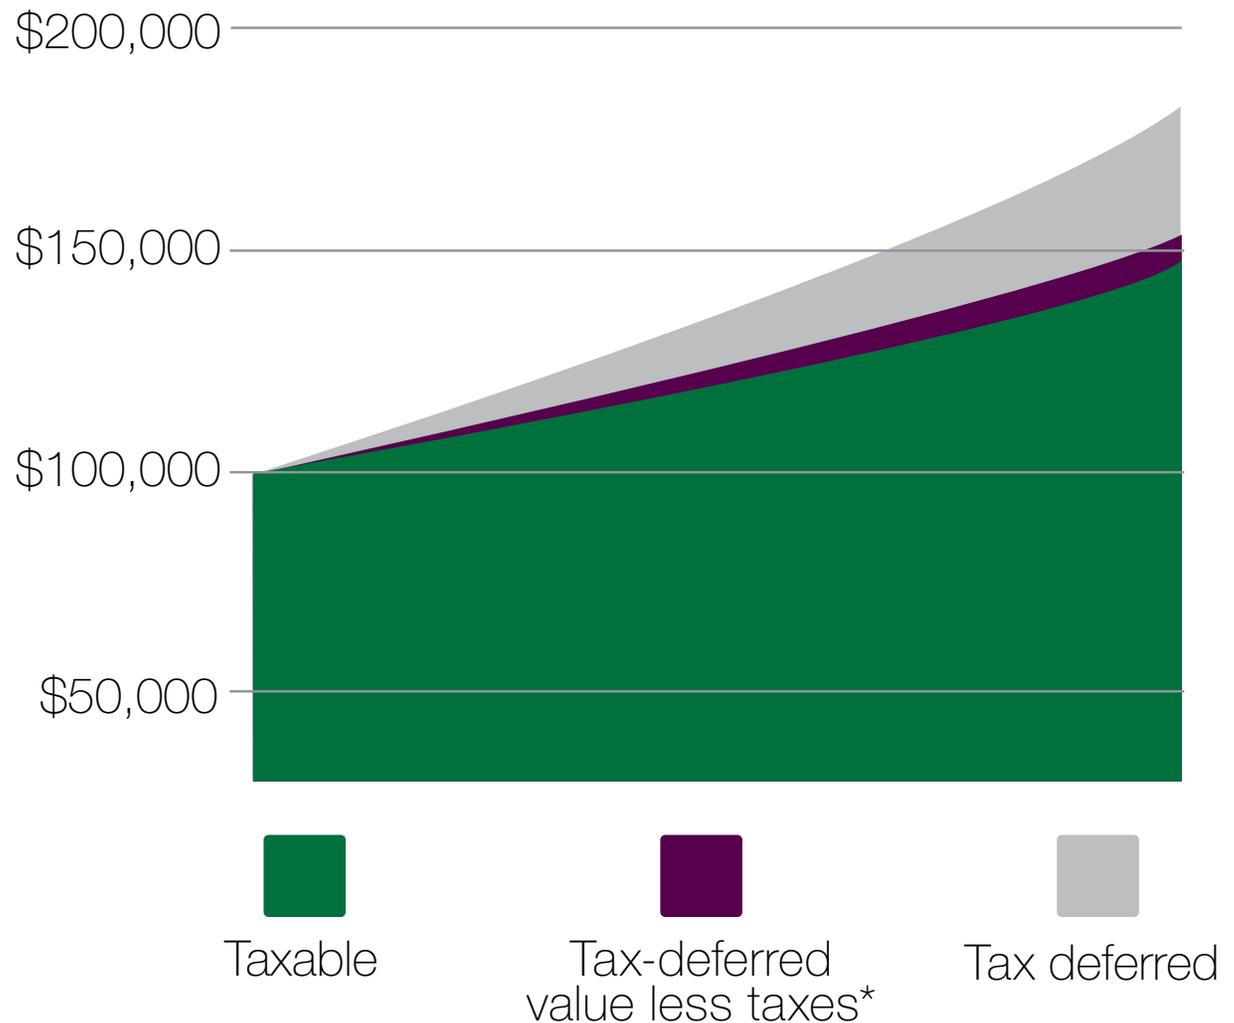

Tax deferral

You won't owe tax on your fixed index annuity interest earnings until you or your beneficiaries start receiving income.

** The chart is a hypothetical example of tax deferral and assumes an initial premium of \$100,000 earning 4% compounded annual rate of return for 15 years. It is not intended to predict or project performance.*

**The tax-deferred value less taxes represents the increase in value, due to tax deferral, less taxes at an assumed rate of 33% with no surrender charge or market value adjustment (MVA), also known as interest adjustment, applied.*

Under current law, annuities grow tax deferred. An annuity is not required for tax deferral in qualified plans. Annuities may be subject to taxation during the income or withdrawal phase. Note: Neither North American, nor any financial professionals acting on its behalf, should be viewed as providing legal, tax or investment advice. Consult with and rely on your own qualified advisor.

FIA highlights: Liquidity

If you have concerns about the expenses of nursing home care should your path change later in life, you may be able to adapt your FIA to changing life situations.

If your client's beneficiaries are adult children, it might be beneficial to plan a “family meeting” with all parties involved. This allows you to create a holistic plan, as well as identify other assistance you can provide.

FIA highlights:
Leaving a legacy

Your FIA provides a death benefit to those you love in the manner that could best fit their specific financial needs.

Properly naming a beneficiary may help you avoid probate, which can be costly and cause major delays.

This is intended to show how FIAs relate
in terms of risk and features.

Other financial products

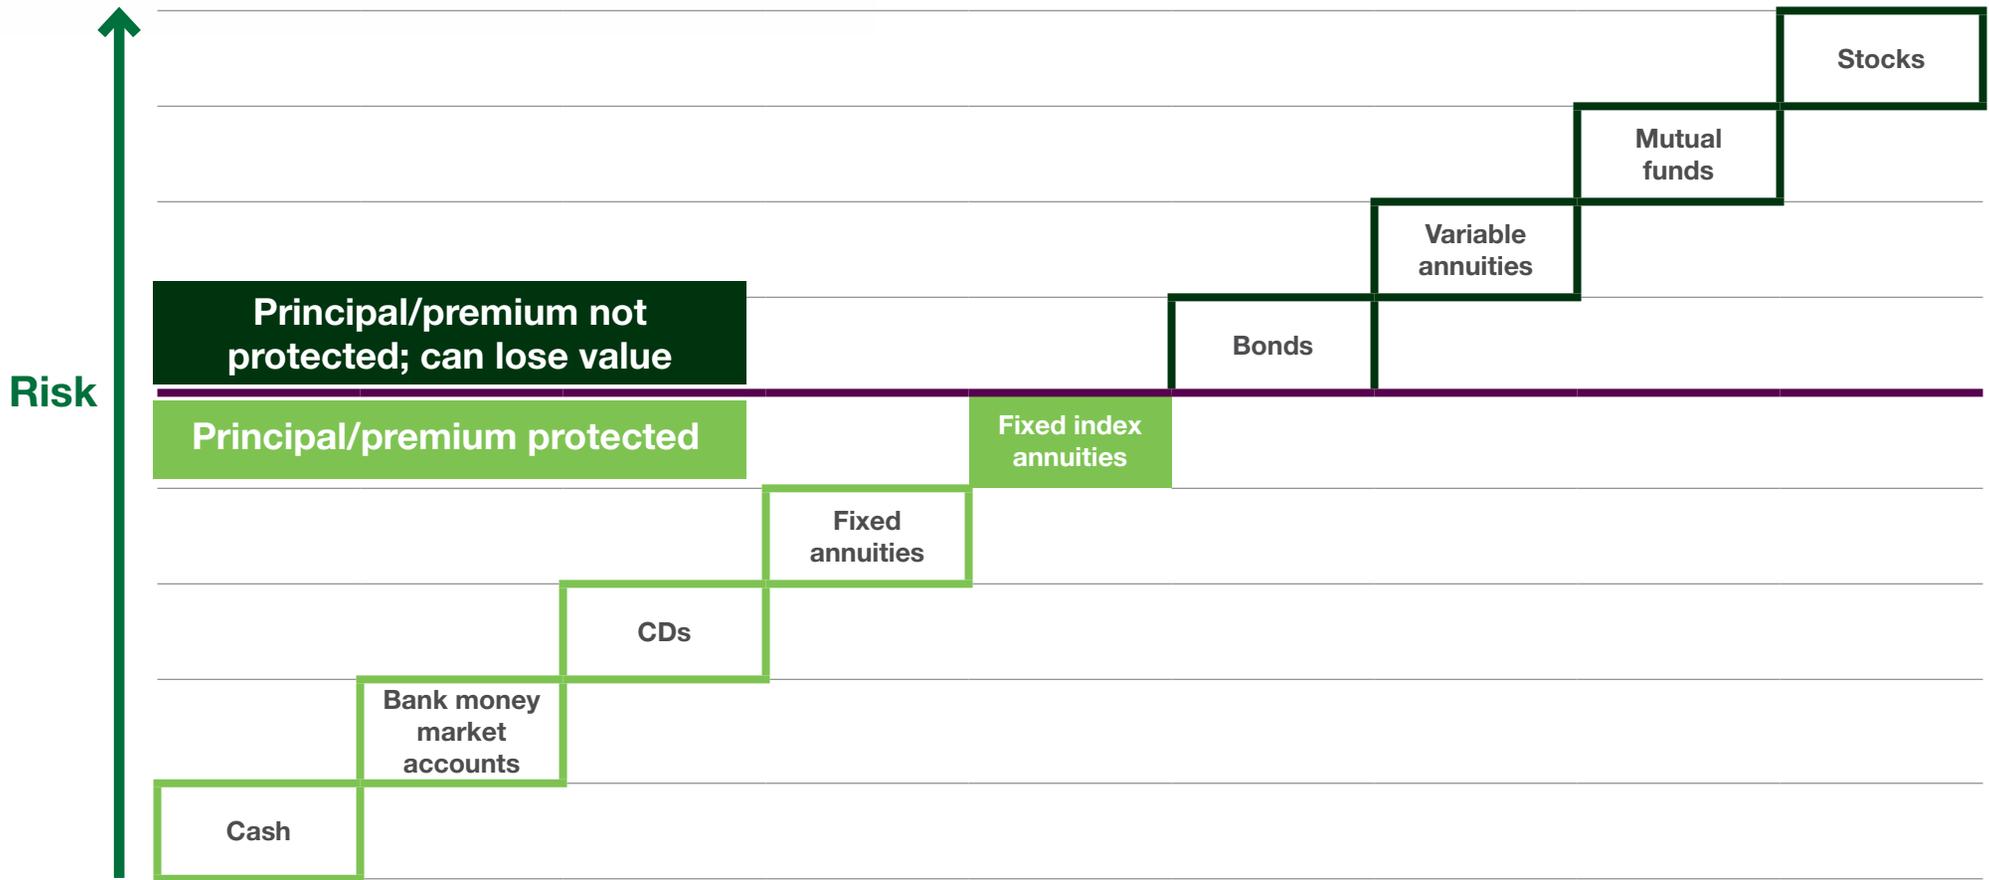

Which of these are you most familiar with?

- Savings accounts
- Money markets
- CDs
- Multi-year annuities
- Fixed index annuities
- Variable annuities
- Stock mutual funds

This is an opportunity to show where FIAs fit on the risk spectrum. FIAs ensure the premium is protected from market downturns, which puts them below the line on the chart.

There is no “best” product, but there are products that can be a better fit in order to help meet your clients’ goals.

How FIAs compare: Risk spectrum

The above chart is meant to serve as a general guide of where FIAs may fall in the financial services spectrum of common products. It is not a guarantee of performance individually or performance correlation or safety of the above listed vehicles.

How FIAs compare: Features

	Safety of principal/premium	Tax deferral	Guaranteed lifetime income	Growth potential
Savings account	✓			
Certificate of deposit	✓			
Money market	✓			
Multi-year fixed annuity	✓	✓	✓	
Variable annuity		✓	✓	✓
Stock mutual fund				✓

Exploring fixed index annuities

4350 Westown Parkway | West Des Moines, IA 50266 | NorthAmericanCompany.com

Fixed index annuities are not a direct investment in the stock market. They are long term insurance products with guarantees backed by the issuing company. They provide the potential for interest to be credited based in part on the performance of specific indices, without the risk of loss of premium due to market downturns or fluctuation. Although fixed index annuities guarantee no loss of premium due to market downturns, deductions from your accumulation value for additional optional benefit riders could under certain scenarios exceed interest credited to the accumulation value, which would result in loss of premium. They may not be appropriate for all clients.
